

$$(a) \quad o' = \frac{o - \alpha_i v_i}{1 - \alpha_i}, \quad \Delta_i = \frac{\alpha_i}{1 - \alpha_i}(o - v_i)$$

(b) Pairwise ranking-inversion boundary (Thm.~5.1)

Note: panel (b) compares only the local-perturbation ranking of two candidates;
it makes no claim about which eviction policy wins downstream (Sections 7-9).
